

## CSC 4610 – Laravel Practice 4

In this practice you will be working with authentication in Laravel. You must submit your work on Canvas to receive credit.

### Add User Login

Create a two new pages for login and register for your cat site.

Notes:

- For logged in users the nav bar should show a welcome username message and a logout link/button
- For logged out users the nav bar should show both a login and register link/button
- Registration and login should provide simple validation of their forms
- Upon successful login redirect the user to the index page
- You are welcome to try and use Laravel Breeze for this, although I have never done so personally.

### Database Integration

Make sure your login and register pages are properly connected to the database.

### Final Submission

For this assignment rather than a copy of your code I would like a walkthrough video of your project setup, blades, and showing me the project running in your browser. Loom is a free tool you can use for this (<https://www.loom.com/>), or you may use another alternative. Please provide a video link and don't upload the video directly.
