CSC 4610 – Laravel Practice 4

In this practice you will be working with the forms in Laravel. You must submit your work on Canvas to receive credit.

Add Cat Form

Create a new page using your template and put a form on it to add cats to the database. You may make the fields simple text entry or add fancier controls like drop-downs if you prefer.

Notes:

- You must add basic validation and error messages to the form elements
- If the form doesn't validate display the previous entry in the form fields
- Upon successful completion redirect to the index page
- Optional: Add a flash message to signal successful adding of the cat to display for 5 seconds on the index page after redirect

Database Integration

Make sure your submit form adds the cats to the database if successfully validated.

Final Submission

For this assignment rather than a copy of your code I would like a walkthrough video of your project setup, blades, and showing me the project running in your browser. Loom is a free tool you can use for this (https://www.loom.com/), or you may use another alternative. Please provide a video link and don't upload the video directly.
